

Inline Tester

The Staht Inline Tester is a modular accessory which works with the Staht t25 load cell to measure force of up to 25kN (5620 lbf) between two points. It allows the test operative to take advantage of the force measurement capabilities of the Load Cell and the Staht Connect App without the need to carry and calibrate a separate measuring device. Typical test applications include testing between fall protection anchors posts, overhead lifting points and rail systems.

Go Digital

with the **Staht Connect** digital reporting app, included as standard.

- ✓ App Included - Free Subscription
